LEAD CAPTURE · HANDOVER FOR KOOK

Every enquiry, straight to their Career Advisor

Postcode-based routing that shows each lead their own advisor's booking calendar the moment they submit, so they leave the page with a call booked.

2,664 postcodes | 10 advisors | Source: POSTCODE MASTER vNOV26 | Working prototype: contact.html

THE CHANGE

From "we'll call you" to "you're booked"

Today a lead fills in a form and waits. Every minute between enquiry and conversation costs conversions.

TODAY

- Fills in a generic form
- Generic thank-you page
  No name, no next step
- Lead sits in a shared pool
  Someone works out who owns it
- Waits for a call they may miss

NEW

- Fills in the form, including postcode
- "You're with Tess, your local advisor"
  Matched instantly in the browser
- Tess's calendar, details prefilled
  One tap to book
- Call booked in Tess's diary, owner set in HubSpot

The lead picks the time, so the call actually connects.

HOW IT WORKS

Five steps, one continuous flow

No page reloads, no generic thank-you page. Red steps are new.

1

Lead clicks a CTA

"Chat with a Career Advisor" anywhere on the site, or a funding-checker result (passes `?from=checker-eligible`).

LEAD

→

2

Fills in the form

Name, mobile, email, **postcode**, course interest. Validated inline: AU mobile, 4-digit postcode.

WEBSITE

→

3

Postcode lookup

Instant, in the browser, no server call. Unknown postcode goes to the team fallback.

WEBSITE

→

4

Sent to HubSpot

Submission carries `assigned_advisor` + contact owner. SMS speed-to-lead fires, naming the advisor.

HUBSPOT

→

5

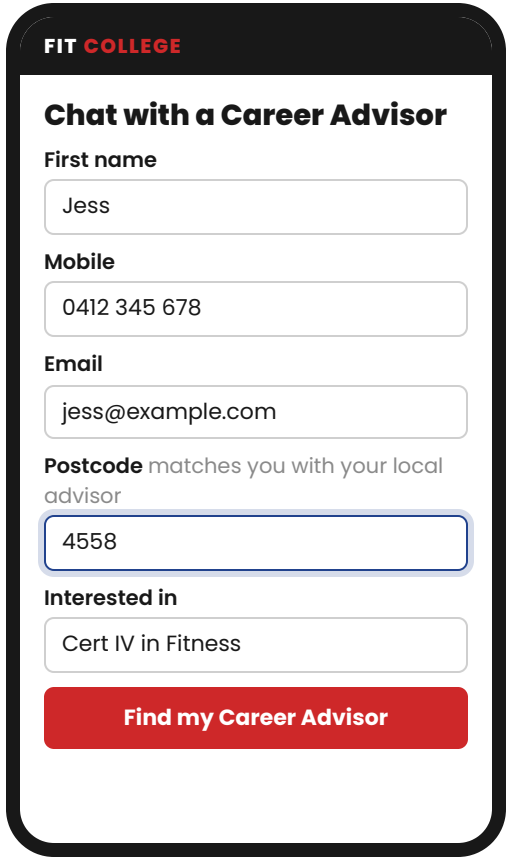

Advisor's calendar

Form becomes "You're with Tess Szabath" + Tess's HubSpot calendar, prefilled. Booking lands in Tess's diary.

LEAD BOOKS

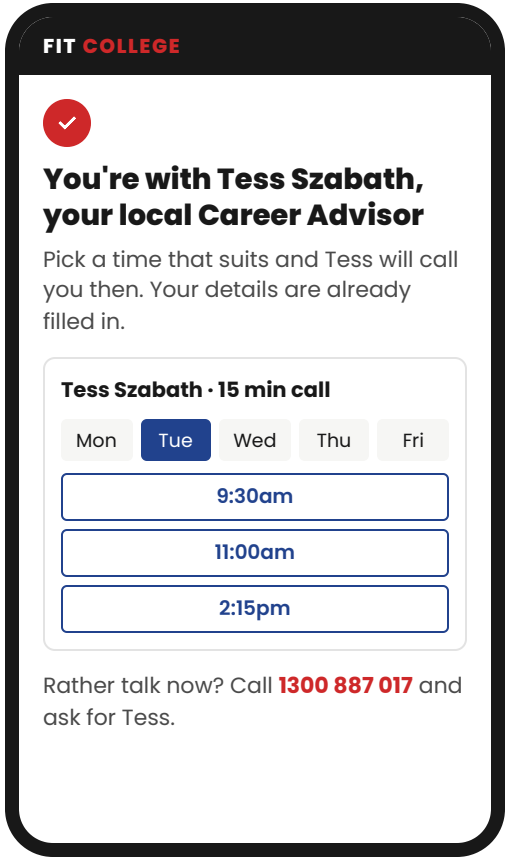

WHAT THE LEAD SEES

Capture → matched → booked

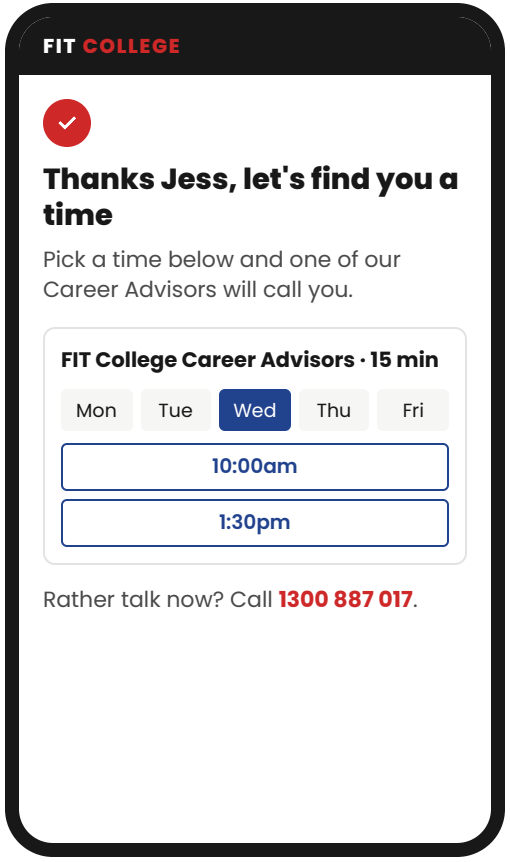

A · Capture

Postcode explained in plain words

B · Matched

Their own advisor's calendar, prefilled

C · Fallback

Postcode not in the sheet: never a dead end

THE ROUTING RULE

One lookup table. No geography maths.

The postcode sheet is the single source of truth. The website and HubSpot both read from it.

Postcode typed

Strip spaces and non-digits. 3 digits get a leading 0 (NT: "800" → "0800").

→

In the table?

Exact match against the 2,664 postcodes in POSTCODE MASTER vNOV26.

→

Yes → that advisor

Their name, calendar and HubSpot owner

No → team fallback

Round-robin team calendar + 1300 887 017

WHO COVERS WHAT

Territories from the postcode sheet

Postcode count isn't lead volume: regional areas have many postcodes but fewer people.

ADVISOR	STATES	POSTCODES	BOOKING LINK (MEETINGS-AP1.HUBSPOT.COM/…)	STATUS
Ryan Crilly	VIC 445 · SA 343 · WA 269	1,057	ryan-crilly	Ready
Sam Russell	NSW 377 · NT 36	413	sam-russell2	Ready
Tess Szabath	QLD 293	293	tess-szabath	Ready
Dean Eggins	VIC 259	259	dean-eggins	Ready
Thomas Jordan	TAS 115 · QLD 99	214	thomas-jordan2	Ready
Paul Mountain	NSW 141	141	paul-mountain	Ready
Nicky Wood	WA 118	118	nicky-wood	Name check
Matthew Johnson	NSW 90	90	matthew-johnson	Ready
Marcus Krause	QLD 48 · ACT 30 · NSW 1	79	marcus-krause	Ready
Shay Best	none	0	shay-best	No postcodes

FOR KOOK · ASSETS

Everything needed to build it

All in the repo under `fitcollege-rebuild/`. Only the two JS files and the CSS block ship to the live site.

FILE	WHAT IT IS	KOOK ACTION
`js/advisor-router.js`	Validation, lookup, HubSpot submit, calendar swap. Vanilla JS, no dependencies.	Add sitewide. Replace demo `submitToHubSpot()` with the Forms API call (marked `[KOOK]`).
`js/advisor-data.js`	Generated lookup: advisors + postcodes (15 KB). No staff mobiles.	Ship as-is. Never hand-edit.
`css/site.css` (lead capture block)	Form + result panel styles.	Port into the CMS stylesheet.
`contact.html` `#book` / `#infopack`	Reference markup for both form types.	Rebuild with the same field names + `data-advisor-form`.
`funding.html`	Checker results link to `contact.html?from=checker-…`	Carry the `from` parameter through.
`data/postcode-master.csv`	The postcode sheet. Source of truth.	Reference.
`data/advisors.csv`	Names, emails, meeting URLs, owner IDs.	Add the 10 HubSpot owner IDs.
`data/hubspot-postcode-owner.csv`	Postcode → advisor email / owner.	Route non-website leads in HubSpot.
`tools/build_advisor_routing.py`	Regenerates the data; stops on clashes.	Run on every sheet update.

Fields and automation

Form fields (internal names)

`firstname` `lastname` `email` `mobilephone` **standard**

`zip`: normalised 4-digit postcode **standard**

`course_interest` **confirm exists**

`assigned_advisor`: advisor name **new property**

`lead_form_type`: advisor / infopack **new property**

`lead_context`: e.g. checker-eligible **new property**

`hubspot_owner_id`: sets Contact owner **confirm form allows**

Automation

1. **Contact owner** via hidden `hubspot_owner_id`. Backup: a workflow on `assigned_advisor` (10 branches, not 2,664).
2. **SMS speed-to-lead** names the advisor. If the lead has already booked, send a booking confirmation, not "we'll call you shortly".
3. **Non-website leads** (Meta lead ads, imports) are routed from `hubspot-postcode-owner.csv`, so routing matches everywhere.
4. **Fallback:** create a round-robin team meeting link.

EDGE CASES & UPKEEP

No dead ends, no code edits

SITUATION	BEHAVIOUR
Postcode not in sheet / overseas / typo	Team calendar + 1300 number; tagged for gap reporting
NT typed as "800"	Padded to 0800 → Sam Russell
Border postcodes (11 rows)	Owner as per sheet, no action
HubSpot submit fails	Calendar still shows; booking creates the contact
JavaScript blocked	Form posts natively to HubSpot (today's behaviour)
Submits twice	De-duped on email; latest postcode wins

When territories change

1. Update POSTCODE MASTER (same columns: POSTCODE, STATE, OWNER).
2. New advisor? Add a row to `data/advisors.csv`.
3. Run `python3 tools/build_advisor_routing.py "POSTCODE MASTER.xlsx"`. It prints counts and stops on any clash.
4. Deploy the regenerated `js/advisor-data.js`.

ACCEPTANCE

How we'll know it works

POSTCODE	EXPECT
4558	Tess Szabath
4000	Thomas Jordan
4215	Marcus Krause
2600	Marcus Krause
2000	Paul Mountain
2150	Matthew Johnson
2300	Sam Russell

POSTCODE	EXPECT
800	Sam Russell
3000	Dean Eggins
5045	Ryan Crilly
6027	Nicky Wood
7000	Thomas Jordan
9999	Fallback

Before go-live

- ☐ All 10 booking links open and embed on the live domain
- ☐ Name + email arrive prefilled in the booking form
- ☐ Test lead in HubSpot has `assigned_advisor`, `zip`, `lead_context`
- ☐ Contact owner = matched advisor
- ☐ SMS arrives < 5 min and names the advisor
- ☐ Booking appears in the advisor's own calendar
- ☐ Fallback round-robin link live
- ☐ Stanley sign-off

BEFORE BUILD STARTS

Open items

Decide **Shay Best owns no postcodes** in vNOV26, so Shay will never be matched. Intentional, or missing from the sheet?

Confirm **"NICOLA WILLIAMS"** in the sheet is Nicky Wood (nicola.wood@, WA). Built on that assumption.

Create **Round-robin team meeting link** in HubSpot for the fallback.

Supply **HubSpot owner IDs** for the 10 advisors, so Contact owner sets automatically.

Decided **Staff mobiles aren't published.** The routing file is public; 1300 887 017 is the phone fallback.
